EXPLANATION OF FEES

Dear Patient:

Headaches, poor academic performance, ADD/ADHD and eye strain are often caused by undiagnosed and untreated visual problems 15% of the time. You may have already come to the conclusion that glasses are not the answer to your problems. We have over 45 years combined experience in visually-related learning disorders at Heartland Eye Consultants. It is important to understand that the kind of vision care the doctors provide goes beyond routine eye care. Their neuro-developmental examination is best thought of as a step-by-step process that methodically collects pieces of a puzzle that are then assembled to reveal the *whole visual function*. This letter describes the examinations needed to thoroughly evaluate all systems that can contribute to these often frustrating problems.

There are three levels of vision examination that need to be completed. The first level is a thorough examination of the eyes (with dilation). It is performed to determine the best possible prescription, if needed, and to rule-out any eye disease. This exam is *covered* by *most* major medical insurance policies. We do not participate in "vision/eyeglass" plans; therefore you may be responsible for a portion of your examination. Insurance codes that are typically used are: 99204 and 92015.

The second level of vision testing is done to determine if eye-teaming abnormalities exist that may be disturbing your child during reading or writing activities in school or at home. These issues can cause loss of place, poor comprehension or recall while reading, double vision, blur, headaches, etc. *Most* of this exam is covered by *most* major medical insurance policies. The insurance codes used are: 99214 and 92499.

The third level of vision that is examined tests your ability to process and utilize your vision. These tests may not be recommended. This evaluation utilizes standardized, objective developmental visual perceptual tests with analysis of the results and consultation with the doctor. The testing is done in one to two sessions and includes assessments of vision that is not covered in any other type of evaluation done by psychologists or your primary eye doctor. We are not testing visual acuity, knowledge or IQ, but rather your ability to use vision to learn. These tests are covered by some insurance companies and not by others. The insurance codes used are 96116, 96121 and 99358. Some insurance companies have reclassified mild developmental delays as non-medical and therefore deny payment for testing or treatment. It is not an indication of the tests' worth or significance to you. It is simply a choice the insurance company made to lower your monthly premiums.

We look forward to helping you find the answers to your questions about your vision problems. Helping you attain trouble-free reading and learning is one of our passions at Heartland Eye Consultants!

Sincerely,

Patient Care Services
